Vectors And Geometry In Two And Three Dimensions

§1.1 Points and Vectors Each point in two dimensions

may be labeled by two coordinates (a, b) which

specify the position of the point in some units with

respect to some axes as in the figure on the left

below. Similarly, each point in three dimensions may

be labeled by three coordinates (a, b, c) . Jan 11th,

Dimensions 1.1 Vectors In Two Dimensions You've

probably heard of vectors as objects with both

magnitude and direction, or something along these

lines. Another way to envision a vector is as an

arrow from one point to another. A vector starts at

some basepoint and extends to some terminal point.
