Angular Momentum 1 Angular Momentum In Quantum Mechanics Angular Momentum 1 Angular Momentum In Quantum Mechanics

As is the case with most operators in quantum mechanics, we start from the classical definition and make the transition to quantum mechanical operators via the standard substitution $x \rightarrow \hat{x}$ and $p \rightarrow -i\hbar \nabla$. Be aware that I will not distinguish between the two. In other words, quantum mechanically $L_x = YP_z - ZP_y$; $L_y = ZP_x - XP_z$; $L_z = XP_y - YP_x$: These are the components. Angular momentum is the vector sum of the components. The sum of operators is another operator, so angular momentum is an operator. We have not encountered this before.
