Number 1 represented by the point $(1;0)$, and the complex number i represented by the point $(0;1)$. The X-axis is called the "real axis," and the Y-axis is called the "imaginary axis." For example, the complex numbers $2+3i$ and $4-i$ are represented by the points $(2,3)$ and $(4,-1)$ in the complex plane. Distance and midpoint formula in the complex plane: Distance between the origin $(0,0)$ and the point (a,b) in the complex plane. For two points in the complex plane, the distance between the points is the modulus of the difference of the two complex numbers. Let (a,b) and (s,t) be points in the complex plane. The difference of the complex numbers is $(a-s) + (b-t)i$.

Newton's method in the complex plane: The zeros of $f(z)$ are complex numbers z for which $z^2 = 1$, that is 1 and -1 . These numbers called the square roots of unity, are written as $1+0i$ and $-1+0i$ in complex notation. Newton's method generates a sequence of z_n values.
