Two Proofs Of The Central Limit Theorem  
Expanding The Taylor Series Of  $Ee^{tX}$ , We Discover The Reason It's Called The Moment Generating Function:  $M_X(t) = \sum_{N=0}^{\infty} \frac{E[X^N]}{N!} t^N$ : The Moment Generating Function Is Thus Just The Exponential Generating Function For The Moments Of  $X$ . In Particular,  $M_X(0) = E[X^0]$ : So Far We've Assumed That The Moment Generating Function Exists, I.e. The 1th, 2024

... 2th, 2024BIO5312 Biostatistics Lecture 04: Central Limit Theorem ... The Moment-generating Function (mgf) Of A Random Variable  $X$  Is Defined As  $\phi(t) = E e^{tX}$  ... Has A Taylor Series Expansion About Zero :  $\phi(t) = \sum_{n=0}^{\infty} \frac{t^n}{n!} E X^n$  And  $\phi'(0) = E X$  Since  $X$  Is A Sum Of Independent Random Variables, We Need To Show The Mgf Tends To The Mgf Of Standard Normal Distribution.

1th, 2024Law Of Large Numbers, Central Limit Theorem This Is The Law Of Large Numbers: As  $N \rightarrow \infty$ , The Average  $\bar{X} = \frac{X_1 + \dots + X_n}{n}$  Tends To  $\mu$ . Remember: This Is Not Just A Good Idea—it's The Law. To Understand What's Going On, Remember That The Standard Deviation Of  $\bar{X}$  Is  $\frac{\sigma}{\sqrt{n}}$ . As  $N \rightarrow \infty$ , The Deviation Of  $\bar{X}$  Approaches 0, So It's Natural To Think Of  $\bar{X}$  As A Constant.
